

F05 | ByT5 nominal 2/5/10-pass adaptation

Repair Without Rewrite / DEVELOPMENT evidence / seed 42

Reporting state	Nominal presentations	Actual presentations	Completed update	Offset (actual - nominal)
Initialization		0	0	0
2-pass nominal	28,226	28,228	7,057	+2
5-pass nominal	70,565	70,568	17,642	+3
10-pass exact	141,130	141,130	35,283	0

Reporting state	Natural WER %	Completed repair /1,413 errors	Introduced /50,926 words	Natural failures /2,696 cases	Generated decoder failures /288 cases
Initialization	100.000000	0	49,648-49,652	2,696	288
2-pass nominal	3.012214	84	205	1	69
5-pass nominal	3.073086	105	257	1	171
10-pass exact	3.239995	120	357	0	63

Nominal 2/5: first completed update at/after the boundary. Offsets are inside the fixed trajectory.

Only the exact ten-pass endpoint supplies adequacy, and fails WER below RAW; no checkpoint is selected.

Count ranges are alignment bounds. Sampling intervals are not drawn; seed/domain/pretraining uncertainty is unmeasured.
